

DWA_04.3 Knowledge Check_DWA4

1. Select three rules from the Airbnb Style Guide that you find **useful** and explain why.

1. Using const to for all your references- this ensures that you can't reassign your references which will keep your code clean and not confusing about where things came from.
 2. Use computed property names when creating objects with dynamic property names- this helps you remember what each object is exactly and where you can use it or reference it, helps code complexity.
 3. Use literal syntax for array names, so using const newArray = []; instead of const newArray = new Array (). It also helps with readability and having clean code.
-

2. Select three rules from the Airbnb Style Guide that you find **confusing** and explain why.

1. Use array spreads (...) to copy arrays- in my mind I think that if there are 3 dots, it will copy the first 3 items of the array only.
 2. Use object destructuring when accessing and using multiple properties of an object- I just struggle with destructuring in general even after all the work we have done with them.
 3. Always use Class, avoid manipulating prototype directly- classes a still a newer concept for us but I think with time, writing them will become easier, with the constructor etc.
